

Next Generation Central Vacuum System....

The **RETRACTABLE HOSE** Central Vacuum System

Hide-A-Hose solves the problem of carrying and storing a central vacuum hose.

Simply pull out the amount of hose you need and begin vacuuming.

- When you're finished, the suction from the central vacuum power unit retracts the hose.
- Hose lengths are customized according to the size of the floor. Each inlet can cover up to 2300 sq. ft.

Hide-A-Hose – The newest Central Vacuum technology for your new home

Greener, Healthier Homes

A valuable addition to a healthier home is a built-in central vacuum system. The power unit is up to five times more powerful than a conventional vacuum. So it captures more dust, dirt and allergens and completely removes them from the living area. Traditional vacuums can spread particles and allergens around your home and recirculate them into the air you breathe. A recent clinical study found that using a central vacuum can improve allergy symptoms 40 to 60 percent. Many green building programs recommend or even require central vacuums.
